Example basic table	2
Customize the table's appearance	2
Customize the table's appearance II	6

Install and read in R packages needed

```
library(NHANES)
library(gtsummary)
library(gt)
library(dplyr)
library(purrr)
```

Read in the demo data

```
data <- NHANES::NHANES
```

Example basic table

```
data %>%
  # Remove missing data in the Diabetes variable for simplicity
  filter(!is.na(Diabetes)) %>%
  # Select relevant variables
  select(Gender, Age, AgeDecade, Race1, BMI_WHO, Education, MaritalStatus, HHIncome, Work,
  # Create a summary table by Diabetes group
  tbl_summary(
    by = Diabetes,
    statistic = list(
      all_continuous() ~ "{mean} ({sd})",
      all_categorical() ~ "{n} ({p}%)"
    ),
    label = list(
      AgeDecade = "Age group",
      Race1 = "Ethnicity",
      BMI_WHO = "BMI group",
      HHIncome = "Household income",
      Work = "Employment status"
    )
  ) %>%
  add_overall() %>%
  add_p() %>% # Test for differences between groups
  bold_labels() %>%
  modify_header(label = "**Characteristic**") %>% # Update column header
  as_gt() %>%
  gt::tab_header(
    "Table 1: Sociodemographic Characteristics of Patients With and Without Diabetes in t
  )
```

Customize the table's appearance

- **Move the total column** to the far-right end of the table for improved readability.
- **Remove the 'N = xxxx'** from the header to streamline the table's appearance.
- **Add a "Total (denominator)" row** at the top of the table for better context and clarity.
- **Avoid decimal places** for both numbers and percentages for a cleaner presentation.
- **Include additional summary statistics** for continuous variables, such as mean (SD), median (IQR), and range, to provide a more comprehensive summary.

Table 1: Sociodemographic Characteristics of Patients With and Without Diabetes in the Demo Dataset

Characteristic	Overall N = 9,858 ¹	No N = 9,098 ¹	Yes N = 760 ¹	p-value ²

```

Customize the table's appearance II

Separate the Number and Percentage Columns: Split the n (count) and p (percentage) values into two separate columns in the table.

Right-align the Number and Percentage Columns: Apply `cell_text(align = "right")` to these columns.

Add Colors: Apply `cell_fill()` for background colors and/or `cell_text()` for text colors to enhance readability.

Table 1: Sociodemographic Characteristics of Patients With and Without Diabetes in the Demo Dataset
